

BANNER GL

BROAD SPECTRUM SYSTEMIC FUNGICIDE THAT PROVIDES DISEASE CONTROL IN TURF AND ORNAMENTALS

Banner GL contains the active ingredient Propiconazole, providing disease control in turf and ornamental settings and other landscape and nursery plantings. In turf it controls dollar spot, brown patch, anthracnose, red thread, rust, powdery mildew, stripe smut, summer patch, spring dead spot, gray leafspot, pink snowmold, gray snowmold, and zoysia patch. In ornamental, landscaping and nursery plantings it controls powdery mildews, rusts, leafspots, and blights. Used in a preventative disease control program, initiate applications according to local recommendations or at first signs of disease.

Active Ingredient

Propiconazole 41.8%. Contains a nominal 3.6 pounds of active ingredient per gallon.

Packaging

2 x 6 x 7.2 oz. WSP / CS

Application Sites

Turf settings, ornamentals and other landscaping and nursery plantings.

Application Rates

Rates and application interval timing is too broad to summarize. Please refer to label for rates and interval timing.

Benefits

- Excellent in a preventative disease control program.
- Tank mix compatible with many other fungicides for a broader spectrum of control.
- Easy on plants, reducing the potential for turfgrass and ornamental plant injury.
- Designed and developed specifically for turf and ornamental settings.
- Superior control of powdery mildew.
- Just drop packet in tank and mix.
- Control of both soil-borne and foliar diseases.
- Both a warm-season and cool-season grass fungicide.

Important

Do not graze animals on treated areas or feed clippings from treated areas to livestock or poultry. Bermudagrass can be sensitive to Banner GL. Follow label directions. Do not apply to cherry, citrus, peach, plum nectarine or pecan trees that will bear harvestable fruit within 12 months of application.

This information is intended as a guideline only.
Always read and follow label directions.
